

Use of Lead in NeumanTree Artificial Christmas Trees and Lights

Lead in Trees

The quantity of lead found in a NeumanTree unlit PVC artificial Christmas tree is so small that it falls well under the threshold where a lead warning would be required. In fact, in laboratory tests performed by our manufacturer, the quantity of lead found in the high-quality PVC used in NeumanTrees was “not detected”.

Lead in Light Sets

Light sets of all manufacturers contain enough lead that the state of California requires a Proposition 65 warning on the cords of lighted trees. As a result, we advise taking precautions when handling lights on or off of your tree. Specifically:

- ✓ Keep light strings out of your mouth.
- ✓ Be especially watchful when young children are near a Christmas tree with lights.
- ✓ Be sure to wash your hands after working with lights.
